Secure.

Colocation

Entanet's colocation facilities, based in Telford and London, offer a cost effective, secure and highly accessible way of hosting your hardware and applications without facing the challenges associated with maintaining your own servers.

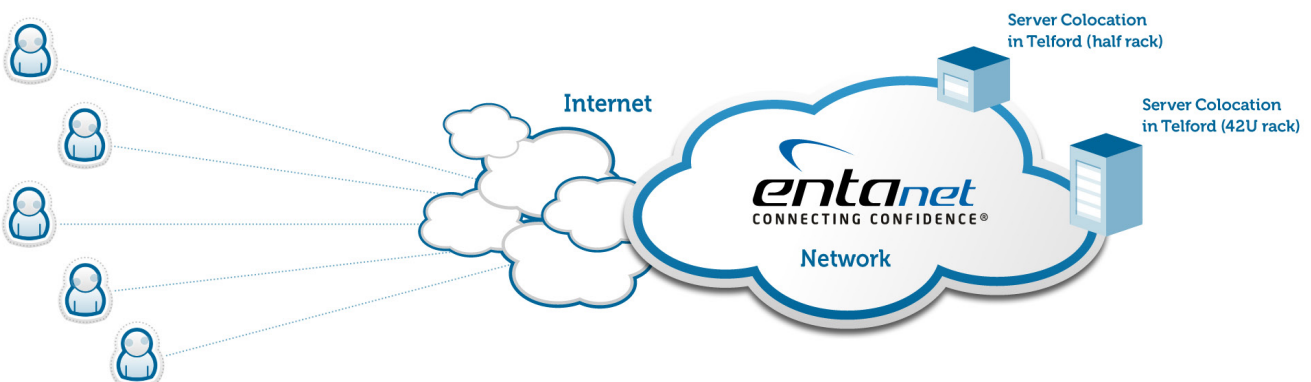

We maintain multiple bespoke data floors, each with air conditioning and overhead cable management. Customer confidence is borne from the knowledge that their equipment is protected by rigorous security measures including 24/7 guard patrols, a controlled access system and extensive CCTV monitoring.

Meanwhile, further assurance is gained with the provision of UPS power backup systems and dual 900kVA diesel generators with automatic failover, ensuring power

continuity in the event of an area-wide power outage.

All servers are rack-mounted and available in half and full-rack options with 5A power per cabinet (upgradable to 8A or 10A) provided as standard at our Telford base. In London we can provide up to 16A per rack. With customers responsible for supplying and maintaining their hardware, Entanet's Network Operations Centre team monitors the data floors and network 24/7.

How colocation works

Features

Colocate in Telford & London

Intense security measures including 24/7 guard patrols, CCTV and multi point controlled access

Air conditioned data rooms with overhead cable management

Managed Cisco router

5A, 8A or 10A nominal power per cabinet, UPS power backup and dual 900kVA diesel generators

Central location of Entanet's Telford data centres

24/7 network and data room monitoring

Benefits

Maintain control over your servers, conducting maintenance and updates in a secure location.

Total confidence that your information is protected.

A well-managed environment for optimum performance of your equipment.

Continuous management by Entanet ensures any faults are dealt with swiftly.

Continuous power supply to your systems even in the event of an area wide power cut.

Access from all over the UK by road and rail, simplifying regular maintenance and upgrade visits.

Confidence that your organisation's critical data is fully monitored.

Why colocation?

Colocation is particularly suitable for organisations that want to maintain complete control of their hardware and applications without the challenges associated with maintaining their own servers on-site. By locating their servers off-site in a highly secure, controlled and continuously monitored environment, they are able to maintain a rigorous disaster recovery strategy. They are also better able to simplify the provision of network links to regional offices and remote users.

Entanet's colocation solutions provide organisations with peace of mind that the information on which their business depends on is in safe hands. In markets where loss of information directly and swiftly affects performance and profitability, provision of business continuity is a necessity rather than a luxury and guaranteed data security and availability is a must.
